[Wpf Converter Invert Boolean Free Download For Windows 10 64](#)

# Free Download

---

The different variants of the converter can be declared in XAML as follows:  
`< src:VisToBool x:Key = " TrueIfVisible " Inverted = " False " Not = " False " />< src:VisToBool x:Key = " TrueIfNotVisible " Inverted = " False " Not = " True " />< src:VisToBool x:Key = " VisibleIfTrue " Inverted = " True " Not = " False " />< src:VisToBool x:Key = " VisibleIfNotTrue " Inverted = " True " Not = " True " />`And here is the code:  
`public class VisToBool : IValueConverterprivate bool _inverted = false ;public bool Invertedprivate bool _not = false ;public bool Notprivate object VisibilityToBool( object value)if (!(value is Visibility ))return DependencyProperty.`

Hey, this is my 100th post! (Guess I'll be done now! )I use the following simple converter class in a lot of my projects for the different translations between bool and visibility..  
`UnsetValue;return (( bool )value ^ Not) ? Visibility Visiblepublic object Convert( object value, Type targetType,object parameter, CultureInfo culture)return Inverted ? BoolToVisibility(value)public object ConvertBack( object value, Type targetType,object parameter, CultureInfo culture)return Inverted ? VisibilityToBool(value)Proposed as answer by kainhart Tuesday, January 26, 2010 4:41 PMEdited by akjoshi Monday, April 20, 2009 12:28 PM Added missing codeMicrosoft is conducting an online survey to understand your opinion of the Msdn Web site.. The different variants of the converter can be declared in XAML as follows:  
< src:VisToBool x:Key = " TrueIfVisible " Inverted = " False " Not = " False " />< src:VisToBool x:Key = " TrueIfNotVisible " Inverted = " False " Not = " True " />< src:VisToBool x:Key = " VisibleIfTrue " Inverted = " True " Not = " False " />< src:VisToBool x:Key = " VisibleIfNotTrue " Inverted = " True " Not = " True " />And here is the code:  
public class VisToBool : IValueConverterprivate bool _inverted = false ;public bool Invertedprivate bool _not = false ;public bool Notprivate object VisibilityToBool( object value)if (!(value is Visibility ))return DependencyProperty.. If you choose to participate, the online survey will be presented to you when you leave the Msdn Web site.`

All replies your own implementaiton of IValueConverter would be the way to go i think.. Although the xaml way above is pretty nice too Alternatively you might want to use a RoutedCommand instead of the button/click (or whatever) event because then you would have the CanExecute property which you could set based on which tab was active.
